Mineral and Vitamin Premix	0.50	0.50	0.50

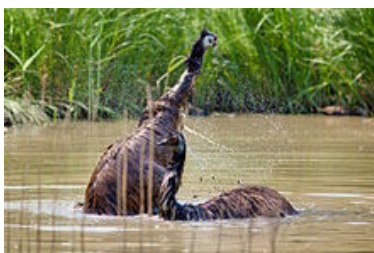

The feather structure prevents heat from flowing into the skin, permitting Emus to be active during the midday heat. They can tolerate a wide range of temperatures and [thermoregulate](#) effectively.

For Feed and water, one Container each per 10 birds is recommended. We may use 10 liter Galvanized buckets for water. Birds require clean and bacteria free water. Water source should be tested for good portability. In well water additives like Potassium permanganate may be used. Also Alum may be used for removing any turbidity. An adult Bird requires 6 to 7 liters of water per day. Water pots should be always kept clean and kept full all times. Even in nights, birds may need water. Feed should be given only in the prescribed timings only. Morning - 7.00 a.m. to 11.30 a.m. Evening - 3.00 p.m. to 6.30 p.m. 1.00 p.m to 2.00 p.m we may provide with greens, finely chopped green vegetables.

Emus also require pebbles and stones to assist in the digestion of the plant material. Individual stones may weigh 45 g (1.6 oz) and they may have as much as 745 g (1.642 lb) in their [gizzard](#) at one time. They also eat charcoal, however scientists still have not ascertained why.<sup>[3]</sup> Captive emus are also known to eat shards of glass, marbles, car keys, jewellery and nuts and bolts.<sup>[40]</sup>

Water Tanks

they love to sit in water
